### REDUCES BACTERIA AND VIRUSES:

Zenoptiq kills 99.99% of Adenoviruses within 30 seconds\*

As one of the most common eye infections worldwide, Adenoviral conjunctivitis, or pink eye, has more than 20 million cases reported each year in the United States alone.

Zenoptiq kills 99.99% of Escherichia coli O157: H within 30 seconds\*

Escherichia coli can produce ocular infections including corneal ulcer and endophthalmitis.

Zenoptiq kills 99.97% of Herpes (simplex virus type 1&2) within 30 seconds\*

Caused by the herpes simplex virus, eye herpes is a common, recurrent viral infection affecting the eyes. Herpes can range from a simple infection to a condition that can possibly cause blindness. The National Eye Institute says an estimated 400,000 Americans have experienced some form of ocular herpes, with close to 50,000 new and recurring cases each year.

### REDUCES ITCH AND INFLAMMATION:

Zenoptiq kills 99.99% of Staphylococcus aureus within 30 seconds\*

Ocular Pruritus is a common symptom of several ocular surface diseases (including MGD, Blepharitis, and Dry Eye). Zenoptiq kills Staphylococcus aureus, which is the most common cause of exacerbation of Pruritus.

Also, the imbalance of microorganisms within the biofilm can lead to inflammation and potential for infection. Studies have shown that Hypochlorous Acid is especially effective at degrading the biofilm and neutralizing inflammatory mediators in the body which also reduces bacterial growth on the skin.
